

Soy Wax Candles vs. Paraffin Based Wax Candles

Why are Soy Candles more expensive?

The majority of the world's candle makers use wax made from paraffin, which is unnatural oil based product. Our candles are made from 100% All Natural soy wax and are hands down, the world's cleanest burning candles available on the market today.

Because soy wax burns cooler, our 8 oz candles burn for approximately 50 hours!

Soy Wax Candles	Paraffin-based Wax
Made from all natural soybeans, and vegetable waxes farm grown in the USA. Soybeans are a renewable resource and using soybeans supports our Economy.	Petroleum-based byproduct of gasoline refining and may be manufactured from Foreign or domestic oil.
Non-toxic and non-carcinogenic. We offer one of the most environmentally friendly candles available on the market today.	Imparts numerous toxins and carcinogens into the air while burning.
Our candles burn clean and Soot FREE making them even more environmentally friendly!	Imparts high quantities of soot into the air that can damage your home's interior.
Costs a lot more to manufacture, but well worth the added expense.	Large manufacturers have profit motive for continuing to use paraffin-based waxes.
Our candles are biodegradable and water soluble - spills clean up very easily with a little soap and hot water.	Not biodegradable or water-soluble. Spilled paraffin wax is difficult to clean and can cause damage to carpets, clothing, furniture and floors.
Our candles burn cooler, more uniformly and last up to 50% longer. There is also absolutely no wasted wax!	Burns much hotter, a lot faster and more unevenly, often causing it to burn down the center of the candle only (tunneling effect).
